

A' —Among the several features that the vapor-chamber base 160 forms is a vertical transfer-pump port 164, through which the drive rod 146 extends. That rod extends into a transfer pump 166 that Fig. 14 omits but Fig. 15 illustrates in cross section. The transfer pump 166 includes an upper cylinder half 168 that forms a cylindrical lip 169, which mates with the transfer-pump port 164 of Fig. 14. It also forms a flange 170 by which a bolt 172 secures it to a corresponding flange 174 formed on a lower cylinder half 176. Fig. 15 also depicts a mounting post 178, which is one of two that are secured to Fig. 14's vapor-chamber base 160 and support the transfer pump 166 by means of flanges, such as flange 180, formed on the upper cylinder half 168.—

REMARKS

The foregoing amendment remedies an obvious typographical error.

**MARK-UP PAGES FOR THE AUGUST 23, 2002, AMENDMENT TO
U.S. PATENT APPLICATION SER. NO. 09/765,475**

The replacement for the third full paragraph of page 12 resulted from the following changes:

Among the several features that the vapor-chamber base 160 forms is a vertical transfer-pump port 164, through which the drive rod 146 extends. That rod extends into a transfer pump 166 that Fig. 14 omits but Fig. 15 illustrates in cross section. The transfer pump 166 includes an upper cylinder half 168 that forms a cylindrical lip 169, which mates with the transfer-pump port 164 of Fig. 14. It also forms a flange 170 by which a bolt 172 secures it to a corresponding flange 174 formed on a lower cylinder half 176. Fig. 15 also depicts a mounting post 178, which is one of two that are secured to Fig. 14's vapor-chamber base 160 and support the transfer pump 1466 by means of flanges, such as flange 180, formed on the upper cylinder half 168.
